

Service Desk

Every organisation is affected by change on a daily basis. For the IT department, management of change has become a key focus area, requiring an increased amount of resource and commitment.

With increasing dependency on business processes across IT services and IT infrastructure, it has never been more important to ensure that changes to the infrastructure are managed to perfection. What's more, you need a detailed understanding of the business impact of an outage as well as the ability to control the process to execute upgrades and changes flawlessly and maintain service availability and service performance to the agreed levels.

Trustco, Service Desk is a comprehensive, scalable IT Service Desk designed to provide a 24/7 support service. Using the Trustco Service Desk ensures you can easily streamline IT service processes as well as manage the IT service life cycle through comprehensive service level management capabilities. Trustco Service Desk also provides effective controls for critical service support and service delivery processes.

Challenges of service and support management
Managing service commitments and keeping users networks mobile is the core goal of Trustco's service support activities. Today, keeping people connected with their network infrastructure is more complex than it has ever been. Technology is constantly advancing, the infrastructure is rapidly converging and the demand changes as businesses evolve. To meet this challenge users are being asked to do more within a shorter timescale, which in turn increases expectations on managing service commitments, motivating and effectively managing support personnel, addressing governance issues and doing so with the constraints of declining budgets.

Optimising service and support

Trustco Service Desk addresses the challenges of managing today's complex service and support requirements. Providing a comprehensive and scalable service management solution Trustco Service Desk is available to you all year round.

The technology behind Trustco Service Desk is designed to deliver maximum benefits to you through a service and support solution that can grow in parallel with your network requirements. Servicing the UK and Ireland, Trustco Service Desk handles over 1 million incidents and requests each year.

Distinctive features and functionalities

Trustco Service Desk is designed to meet all your service and support requirements. Whether you need network integration with supporting IT management or highly capable knowledge resource, Trustco Service Desk can meet the demands of today's businesses. Our service has been tailored over a number of years to accommodate the features and functionality required to support a multi-vendor, non-proprietary technology environment.

Incident management

Incidents are faults, errors and issues that users are experiencing with their network. All incidents are logged immediately through the Trustco Service Desk.

Key features of Incident management:

- > Log calls for users
- > Incidents are automatically routed to teams or individuals based on client and type
- > Full service level times and milestones recorded
- > Time spent on each action and function recorded
- > Link incidents to problems, change requests or known errors
- > View asset information eg. Software installed, hardware specifications
- > Check against open calls, user or asset to prevent duplicate calls being logged

Knowledge management

Within any organisation the distribution of knowledge to staff is essential, allowing staff to have the knowledge resource to perform general day to day roles efficiently and effectively.

Trustco's Service Desk allows knowledge to be recorded, monitored and distributed to the required teams effectively. Partitioned knowledge bases allow managers to decide who has the relevant knowledge to support field engineers with any additional technical information that is essential to enhance service delivery at a customer site.

Raising an incident

Engineers are able to raise new incidents via the Trustco Service Desk. Screenshots or files that can aid the Service Desk in rectifying the incident more efficiently can also be added. After the call has been logged with the Service Desk the engineer has the ability to add additional notes to the call, allowing further actions to take place.

Engineers also have the ability to remotely update calls and even resolve them; by connecting to a secure portal. The secure portal will automatically update the Trustco Service Desk records, ensuring high levels of productivity.

Service level management

The Trustco Service Desk features dynamic Service Level Agreement (SLA) management capabilities. All incidents, requests and engineer calls are recorded into an inventory allowing Trustco Service Desk to quickly search any recent or previous call records.

The 24/7 Trustco Service Desk has the ability to receive and track calls at any time of the day or night ensuring that you are supported in the most efficient way possible, keeping downtime to the absolute minimum.

Key features include:

- > Unlimited SLAs
- > European network of field engineers
- > User defined priorities
- > Breached and near breach analysis with warnings via e-mail, pop up notify, colour coding, BlackBerry/PDA and mobile phone alerts
